

HuRated Movie Studio

Orchestrating AI Production From **Script to** **Screen**

Turning stories into monetizable audio, pre-production assets, and editable 3D movies.

The Generative AI Bottleneck

Broken Continuity

AI video models generate stunning isolated clips, but fail to maintain persistent characters, lighting, or set design across multiple scenes.

No Versioning

Current prompt-to-video tools output flat video files. If a director needs to change a camera angle or single prop, the entire prompt must be regenerated.

Loss of Control

Creators need repeatable scenes, precise asset approvals, and timeline-based edits—not a disconnected roulette of model outputs.

The Production Orchestration Layer

HuRated Movie Studio builds the workflow infrastructure around underlying generative models.

- **Structured Intake:** Breaking down scripts into actionable data.
- **Asset Continuity:** Maintaining persistent characters and props.
- **Rendering Queues:** Managing compute efficiently across models.
- **Editable Outputs:** Moving away from flat video to manipulatable scene manifests.

Phase 1: Immediate Revenue Generation

Audio Drama Automation

Monetizing production today. We use our 64-CPU infrastructure to convert scripts and public domain stories into fully narrated audio dramas complete with integrated music and sound effects, providing immediate value to creators and listeners.

Pre-Production Tooling

Automated script-to-shot-list workflows. The platform generates actionable scene breakdowns, character specs, prop lists, and production notes. We sell practical output while the engine learns how real users structure long-form stories.

Phase 2: **The Vision**

GPU-Powered 3D Engine

Reinvesting revenue to build a fully automated text-to-3D-movie engine. We generate persistent characters, camera moves, and timing across scenes. Instead of one-off clips, we render editable 3D movie sequences with structured scene manifests for ultimate creator control.

Go-to-Market Strategy

Public Domain IP: Leveraging known stories to lower creative barriers and test the pipeline rapidly.

Motion Comics: Converting these stories into high-quality, short-form motion comics.

Social Distribution: Publishing recognizable clips on TikTok, Shorts, and Telegram to drive organic acquisition.

Why This Execution Model Wins

CPU Revenue Funds GPU Ambition

Phase 1 (Audio/Pre-production) creates early cash flow and eliminates reliance on massive upfront GPU capital before product-market fit is proven.

Every Edit Improves the Map

By providing tools to creators today, usage data shows exactly where they need continuity fixes, replacement shots, and faster review cycles.

Public Domain Gives Us Scale

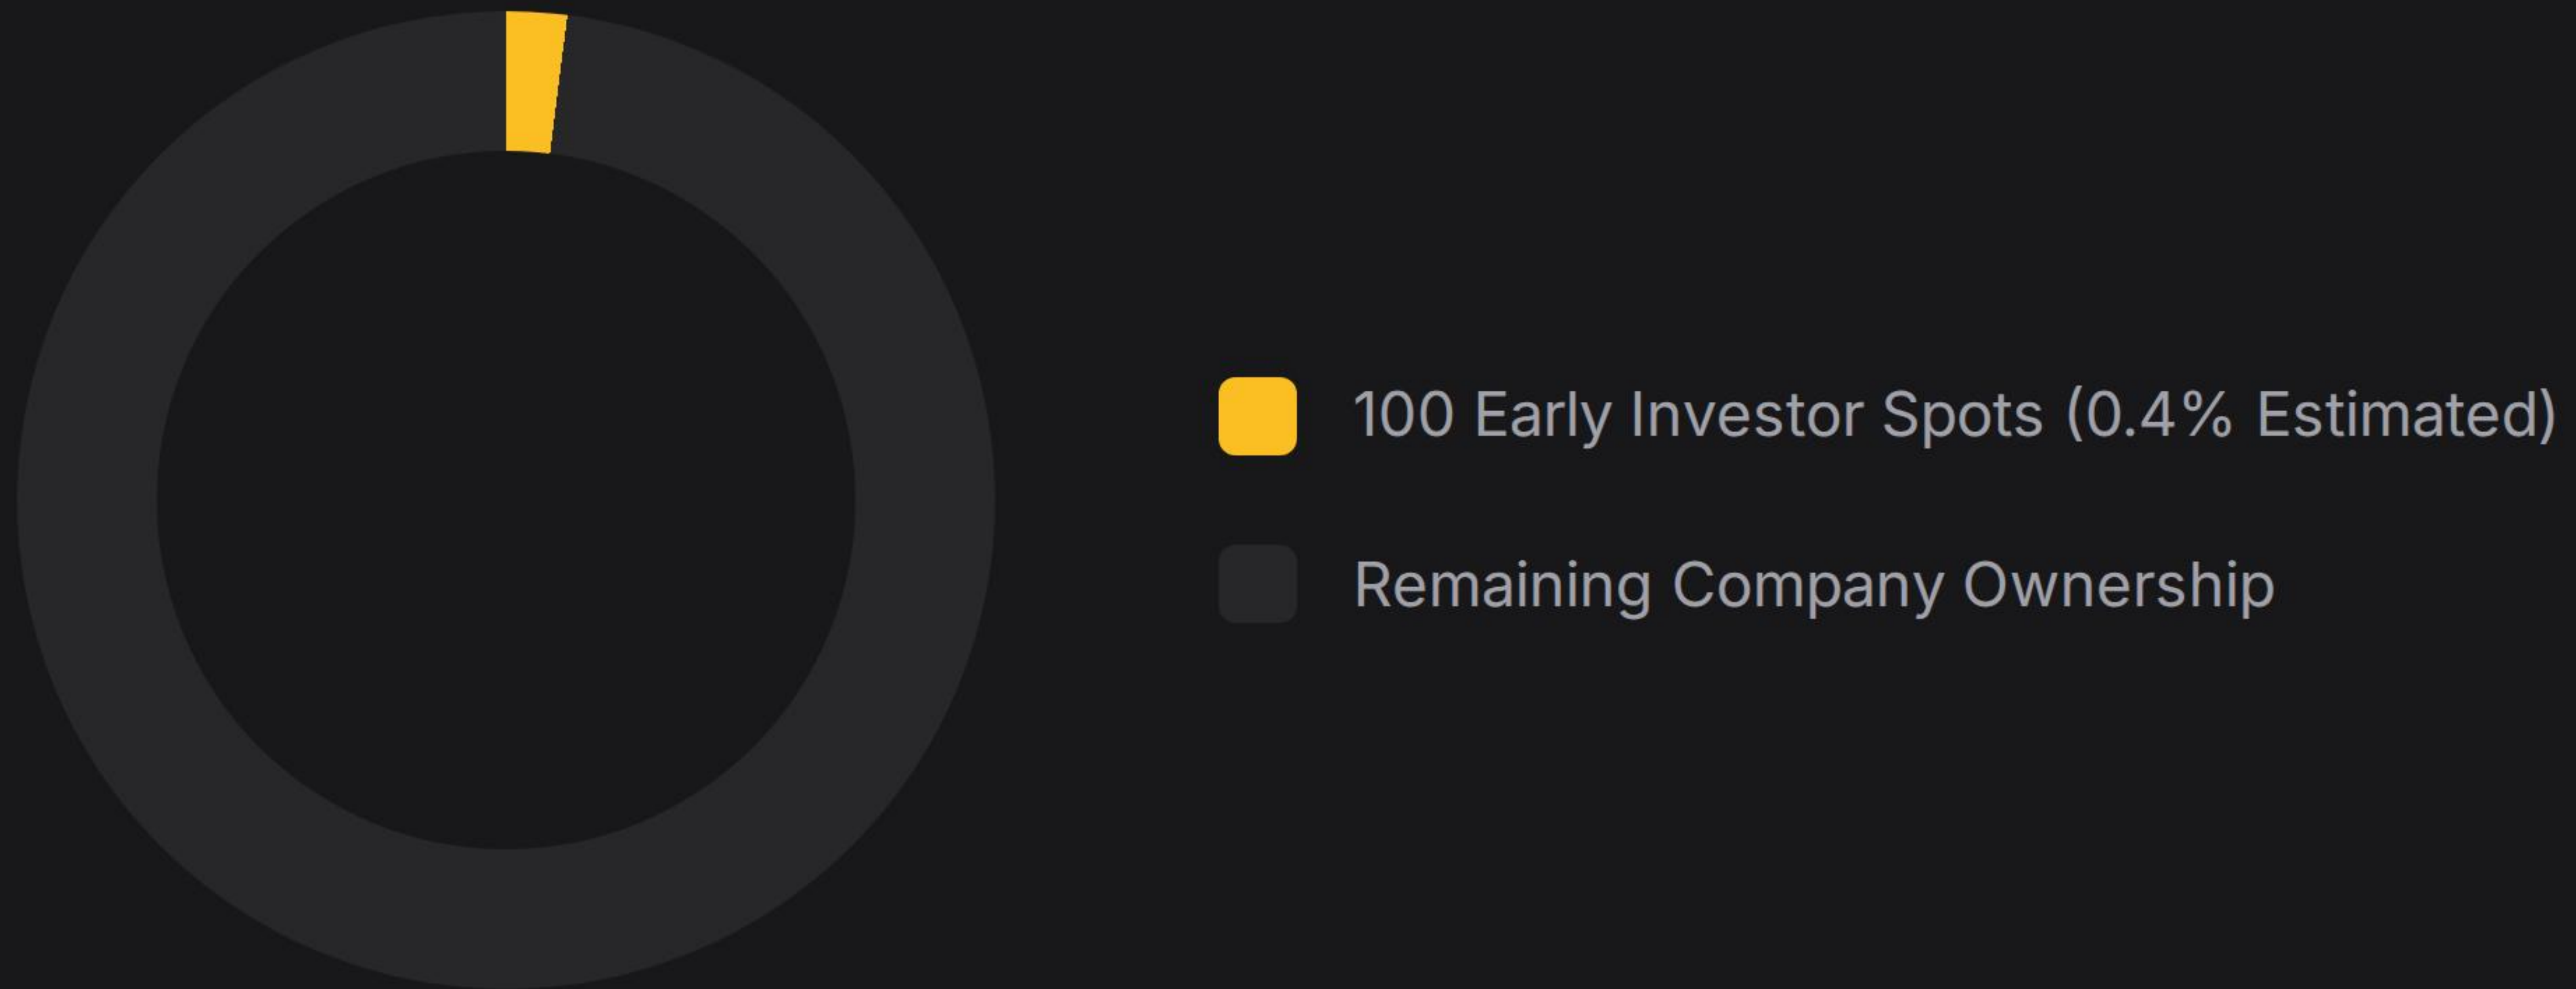

Using established narratives creates a durable, inexpensive stream of social content to acquire users, bypassing cold-start marketing problems.

Built by Proven Engineers

Founder	Role & Background
Denis Bystruev Panamá City, Panama	Full-Stack AI Product Dev, Multimodal & Agentic Systems. <i>Former Apple, IBM, and Intel. Extensive experience architecting scalable software ecosystems.</i>
Stas Shevchenko Andalusia, Spain	Co-Founder, Chief Business Officer (CBO), Product Developer. <i>Driving commercialization, operations, and product strategy.</i>
<i>Together, the founders have shipped over 360 open-source repositories and educational Apple curriculum projects.</i>	

Early Investor Terms

We are raising initial capital through a YC-style SAFE to fund U.S. company setup, infrastructure, and marketing. A single \$200 position grants portfolio-wide upside across HuRated Studio, Buddian, and future ventures.

The Deal Structure

100

Investor Spots Open

\$5M

Post-Money SAFE Cap

Closing the gap between what we believe and what we can prove.

Ready to build.

Thank you to the AltaLab Team.
